Anjali Singh to become Chairperson of ANAND Group

Leading auto component manufacturing conglomerate ANAND Group has announced a significant governance and key management restructuring, in keeping with the high standards of corporate governance and succession planning the group is well known for.

The Group Supervisory Board has ratified and approved the following appointments after thorough deliberations and reviews conducted over the past one year. These changes and appointments will take effect on the 15th of January 2021.

Jaisal Singh, Director, Group Supervisory Board, will, in addition, be appointed Vice-Chairman of a re-constituted ANAND Executive Board.

Goldhofer’s self-tracking trailing dolly solution

For transporting extra-long wind turbine blades, Hofmann Kran-Vermietung GmbH & Co. KG of Paderborn is now using the new ‘bladeS’ blade hauler in combination with Goldhofer’s self-tracking trailing dolly. The German company is one of the first companies to invest in the trailing dolly solution which was introduced only last year.

On their latest job, which included the transportation of three 75-meter-long wind turbine blades from Rostock to the Hopsten-Schale wind farm more than 400 kilometers away, their new equipment was again the key to safe and punctual delivery.

The fact that the three vehicle combinations, each over 82 meters long, were able to complete the journey in the record time of three days was mainly due to the use of the new ‘bladeS’ in combination with a trailing dolly from Goldhofer.

The combination of a blade root carrier on the gooseneck and a five-axle trailing dolly with pneumatic suspension plus turntable and blade support is a new industry benchmark.

Automotive Axles donates India’s first ‘Lab Built on Wheels’

Automotive Axles Ltd. (AAL), a JV between Kalyani Group and Meritor Inc., has donated India’s first ‘Lab Built on Wheels’ to the Government of Karnataka through its CSR initiative. The ‘Lab Built on Wheels’ is a novel initiative by Saicorp Health Technologies Pvt. Ltd. (SHPTL) to serve the rural population of our country, more specifically the State of Karnataka to start with.

This philanthropic initiative valuing healthcare diagnosis for rural masses aims to help our nation at large. The laboratory built on a trailer is part of the overall solution of state healthcare delivery. This is the first laboratory built on wheels in the platform of a trailer in the country (meeting BSL2/3 laboratory safety standards).

The highest quality lab vehicles are built on robust chassis with durability and maximum interior space to adequately fulfil specific needs or services of the public at large.
